By preliminary amendment filed concurrently with the application, claims 1-10 have been canceled and new claims 11-20 have been added and are pending.

New corrected drawings are required in this application because the proposed changes to the drawings filed February 2, 2002 are acceptable. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 11 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Maxson.

The patent to Maxson discloses a "pressure control valve (fig. 3a) with integrated pressure sensor (embodiment of fig. 4), comprising: a valve (fig. 3, 503) member arranged in a valve housing (fig. 3, 505; fig. 4, 606), a sensor element (602) for generating an output signal that is a function of a fluid pressure reaction of the valve housing (606), wherein the fluid pressure reaction of the valve housing (606) is

determined by the sensor element (602) by using the sensor to detect a deformation of the valve housing (606)" as claimed in claim 11, as disclosed at column 6, lines 16-27.

Regarding claim 16, Maxson discloses "the valve housing (606, including) an area (read as the upper horizontal section of the housing 606 of fig. 4) made from a thin walled sleeve (the upper horizontal section is read as a "thin walled" portion of the valve "sleeve" enclosing the right end of the solenoid coil of fig. 3a) and wherein the sensor (602) is arranged on said thin-walled sleeve" as claimed.

Claims 13-15 and 17-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

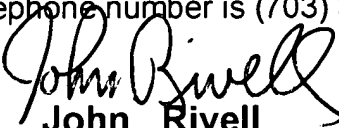

Applicant may wish to consider amending line 2 of claim 17 to change the recitation "wire gauge strain" to -- wire strain gauge -- or equivalent.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
